

Course Outline Year 7 Semester 2 2026

Mathematics

Course Description and Aims

The framework for MYP mathematics outlines four branches of mathematical study.

1. Numerical and abstract reasoning
2. Thinking with models
3. Spatial reasoning
4. Reasoning with data

The study of mathematics is a fundamental part of a balanced education. It promotes a powerful universal language, analytical reasoning and problem-solving skills that contribute to the development of logical, abstract and critical thinking. The MYP mathematics and challenge mathematics courses promote both inquiry and application, helping students to develop problem-solving techniques that transcend the discipline and are useful in the world outside school.

Mathematics in the MYP is tailored to the needs of students, seeking to intrigue and motivate them to want to learn its principles. Students should see authentic examples of how mathematics is useful and relevant to their lives and be encouraged to apply it to new situations.

MYP Assessment Criteria

Criterion A: Knowing and understanding

Students select and apply mathematics to solve problems in both familiar and unfamiliar situations in a variety of contexts, demonstrating knowledge and understanding of the framework's branches (number, algebra, geometry and trigonometry, statistics and probability).

Criterion B: Investigating patterns

Students work through investigations to become risk-takers, inquirers and critical thinkers.

Criterion C: Communicating

Students use appropriate mathematical language and different forms of representation when communicating mathematical ideas, reasoning and findings, both orally and in writing.

Criterion D: Applying mathematics in real-life contexts

Students transfer theoretical mathematical knowledge into real-world situations and apply appropriate problem-solving strategies, draw valid conclusions and reflect upon their results.

Course Outline

This semester, you will strengthen your mathematical thinking through algebra, geometry, statistics and probability while developing confidence in solving real-world problems. In Term 3, you will explore algebra by solving equations, graphing relationships and investigating patterns. You will apply formulas to calculate area and volume, examine the properties of circles, and solve geometric problems involving angles, triangles and polygons. You will also classify shapes and design algorithms to sort them. In Term 4, you will become a data investigator and probability analyst. You will collect, display and interpret data, calculate summary statistics, and investigate how data values affect results. You will also explore probability through experiments and simulations, represent three-dimensional objects from different views, and apply transformations such as reflections, rotations and translations.

Assessment Tasks

Assessment Task	Due*
Test- Criterion B	Week 5
Test- Criteria A & C	Week 8
Test- Criterion D	Week 14
Test- Criteria A & C	Week 17

**Due date subject to change at classroom teacher discretion.*

Approaches to Learning

Communication skills and Thinking skills.

Australian Curriculum Achievement Standard

The Achievement Standard for Year 7 Mathematics is based on the Australian Curriculum v9 Mathematics <https://www.australiancurriculum.edu.au/>.
